Contents

2.x

2.1

2.4.2 <2015-10-26 Mon>

- Delay thesplog location determination until usage to allow startup code to adjust location.
- Better daemonization of multiproc Admin on Unix.
- Ensure filenums to close is passed as a list not a Python3 iterator when creating multiproc children (bugfix).

2.4.1 <2015-10-20 Mon>

- Updated to allow packets not blocked on waiting for an address resolution to be sent even if previous packets are still waiting for that resolution.
- Fixed documentation uploads.

2.4.0 <2015-10-18 Sun>

- Add loadActorSource() and unloadActorSource() to Actor API (duplicating existing Actor System API functionality).
- Internal: use distributed importlib whenever possible.
- Fix stats response for Actor Systems for Python3.
- Allow optional error strings in reporting actor creation failures.
- Better capture and reporting of loaded source instantiation errors.
- Miscellaneous test and logging updates.

2.3.0 <2015-10-04 Sun>

- Added ActorTypeDispatcher enhanced base class to facilitate dispatching of received messages based on message type.
- Ensure exceptions occurring while writing to Thespian file log do not cause failures.

- Protect against exceptions occurring when comparing messages for equality.
- Updates to `testActorSystemRestart`.
- Update "Thespian Generation" common Capabilities to version (2,3). Previous 2.2.0 release erroneously did not update this value.

2.2.0 <2015-09-27 Sun>

- Fix internal links in Using Thespian document.
- Add support for multiple convention notification registrations.
- Allow `ActorSystem logDefs` to be specified as `False` to suppress any logging configuration; especially useful for test log capture modes.
- Better `ActorSystem` startup processing to distinguish between a re-specification of the current base and a new base, and added the `transientUnique` startup argument to get a plain instance (a non-global-singleton instance).
- Added missing description of the `ActorSystem shutdown()` operation in the Using Thespian document.
- Added ability to set the maximum thesplog logging file via the `THESPLOG_FILE_MAXSIZE` environment variable and changed the default to 50KB.
- Added Using Thespian documentation description of logging with the `THESPLOG_FILE` and `THESPLOG_FILE_MAXSIZE` environment variable controls.

2.1.6 <2015-09-27 Sun>

- Fix imports in tests and `actors.py` for multiple Python versions.
- Add missing timeout to test to prevent hang.

2.1.5 <2015-09-20 Sun>

- Adds support for Python 3.3 and Python 3.4 versions, including the use of the PyPy interpreter.
- Adds the `listen()` API call (`ask()` is `tell() + listen()`)
- Log Actor exception through normal logging channels as well as via Thespian internal logging output.
- The Thespian shell loads the `TestActor` via loadable sources.
- The `simpleSystemBase` will always apply default logging.
- The `loadActorSource()` call can now take a file-like object as well as a filename.
- Added the Thespian Developer's document.
- Added the Thespian In-Depth Introduction document.

- Added the Thespian Index (main pages) document.
- Added the Thespian Releases document.
- Internal updates to more gracefully handle shutdown scenarios and avoid impossible retransmits.
- Testing, documentation, and setup file updates.

2.1.4 Initial Public Release <2015-08-31 Mon>

The 2.1.4 Release represents the first publicly available release of Thespian. It includes the following features:

- System Bases: SimpleSystemBase, MultiprocTCPBase, MultiprocUDPBase, MultiprocQueueBase
- Support for Loadable Sources

2.0

The 2.0 Release was developed and used internally by GoDaddy.

1.x

The 1.x Release series was developed and used internally by GoDaddy
